a<sup>3</sup> ~~The apparatus is structured in such a manner that, when~~ An electrotherapy apparatus for  
generating first and second waveforms having reversed polarities. When the waveform of the  
electric energy outputted from the output electrodes 112a and 112b is the positive phase, the  
inductor 105, electric energy storage section 104, the first switch means 101, output electrode  
112a, patient 113, and the output electrode 112b are connected so that these can form the closed  
circuit, ~~and in.~~ In the case where the waveform of the electric energy outputted from the output  
electrodes 112a and 112b is the negative phase, when the first switch means 101 is closed, the  
inductor 105 and the electric energy storage section 104 form the closed circuit, and when the  
first switch means 101 is opened, the inductor 105 and the electric energy storage section 104 are  
electrically separated, and the delivery of the electric energy to the output electrodes 112a, and  
112b is conducted by the inductor 105.
